

Herbal Products Development Workshop

Prof. Sami Khalid

The workshop is essentially dealing with two aspects related to herbal medicine but they differ significantly in the approach and methodology involved in the process of drug discovery and development. These approaches, however, will either lead to the development of a standardised phytotherapeutical products based on the totality of the chemical ingredients present in a plant (i.e. herbal product) or the isolation of a single bioactive natural product of a herbal origin which will be subjected to long process of drug discovery and development entailing a substantial time, cost and advanced technology.

A number of plenary and short lectures will be presented during the two-day workshop to cover almost all aspects related to herbal medicine addressing mainly the following aspects:

- Ethnopharmacology,
- Chemosystematics,
- Cultivation of medicinal plants and standardization,
- Utilization and industrial processing herbal products with special reference to their safety and efficacy,
- Quality control of herbal products,
- Clinical trials and Pharmacovigilance,
- Regulatory aspects involving herbal medicine use,
- Drug discovery of bioactive natural products against neglected diseases (i.e malaria, leishmania, trpanosmiasis, mycetoma etc).

University of Kartoum: Sixth annual postgraduate Conference

18-19 February 2014

Venue:

Soba Educational, Training & Examination Centre (SETEC), Soba University Hospital
