ABSTRACT

This survey is an attempt to shed light on the problem of immigrating parents and its effect on their children & academic performance.

A random sample of 60 pupils from Khartoum North principality was taken half of them were of immigrant parents and the other half was a check. Two separate questionnaires were used & the data was subjected to a descriptive analytic approach together with the statistical tests of "Q²" and "T".

The results showed:

- a. Statistical differences of 05% in the academic achievement in favour of the non immigrants.
- b. There was a functional relationship between following up the pupil's school affairs (Home Works) & his/ her academic achievement.

The survey recommends that :

- a. Children should accompany their parents irrespective of any inconveniences encountered.
- b. That more Sudanese oriented school should be established in contries of high concentration of Sudanese imigrants.
- c. A continuous co-operation between parents and schools should be taken into consideration.
